

**Welcome !**

We are a highly innovative supplier of portable fire extinguishers and fire extinguishing systems. We focus on providing quality and competitive prices customized fire detection and extinguishing systems for ICT, Telecom, PLC cabinets, sverracks, enclosures, wiring cabinets and engine compartments. Our mission is to monitor and protect your business within your IT, Telecom, product manufacturing and company services against fire. We protect buildings and computer environments !

When you are in the field of fire extinguishing gas and extinguishing systems to orient you want than a transparent and efficient system advice. We give you clarity in the range of solutions that secure buildings, computer room(s) or server cabinet(s). By projection of fire detection and extinguishing system is critical that the right connection with other disciplines in a secure room or cabinet extinguishing gas is reached. From our design expertise and deliver extinguishing systems which focus on: implementation sustainability, price, quality, type extinguishing gas, pressure space density, density of housing, speed of the hotspots and the air circulation system of the room or the cabinet itself. Fire protection is an important issue and you strive for a best possible security protection at the lowest possible investment.

The presence of portable fire extinguishers or a fire extinguishing system in the computer room means the difference between a short or permanent break. Nobody can predict when a fire in a building, computer room, server rack or PLC cabinet occurs but we just do not like them. The costs arising from a fire are difficult to initiate because the size of the expected damage is not known beforehand. But we know that failure of production processes and communications customers will walk away, the operating sensitivity decreases and the staff cannot proceed their work.

We reduce fire risks, the laws of Murphy continued the coping is the incorporation of necessity not a luxury, however. Depending on the desired availability requirements can be a choice made for a certain type of extinguishing system. Automatic extinguishing systems not only protect your valuable systems they also offer the best guarantee for a bankruptcy caused by a fire combat. Under normal circumstances a fire virtually any time. In reliance on the protection systems and people for damage limitation measures should be taken. The extinguishing systems which we design and supply are particularly HFC227ea (FM200), Novec and Argon (clean agent) suppression systems. Applying this gas extinguishing systems fire detection systems are supplemented with specific spaces and cabinets which are high sensitive and expensive equipment is fire.

The investment in an extinguishing system is low compared to the loss of property, data, expensive computer systems or even employment, including a fire as a possible basis. The presence of an extinguishing system are unexpected business disruptions to a minimum and your staff remains up and running. A computer room suppression system or cabinet suppression system is the solution for efficient automatic fire prevention. If you need information about computer room fire extinguishing systems or portable fire extinguishers, we serve you !
